RoadGuard DashCam

DESCRIPTION:

With this dashcam, you can feel more secure in the event of an accident. The dashcam records your drives in full 2K quality, ensuring that the recorded videos are high resolution and of excellent quality. The dashcam automatically starts recording when you start your car, so you don't have to remember to turn it on before driving. In addition to video recording, the dashcam features a built-in microphone and speaker. When the camera begins recording, the microphone also activates to capture audio. The camera includes an emergency recording function that automatically saves the recorded video in critical situations. Emergency recording is triggered by sudden braking or collision risks, locking and saving the recording automatically. Through the app, you can access all recorded material and choose which videos you want to download and save. The camera also has a loop recording function, ensuring you always have memory available for new recordings, even when the SD card reaches its file size limit. The loop function overwrites previous recordings that you haven't saved. Files that you choose to save, or that are saved when emergency recording is activated, will not be overwritten, ensuring that valuable recordings are always secure on the SD card if needed. The dashcam easily attaches to the windshield with the included mount, and it can be quickly removed and reattached as needed. Simply plug the included cable into the camera and then into the car's cigarette lighter. Please note that a micro SD card is not included with this dashcam. We recommend purchasing a U3 micro SD card designed for dashcam or CCTV use. It is crucial that the SD card is intended for recording and handling video footage. The micro SD card should be between 64GB to 256GB, 256GB is the maximum storage capacity for this dashcam. Buy Micro-SD-Card
