

DataBlocker 4in1 Cable 1m

DESCRIPTION:

Charge your phone safely no matter where you are! The Data Blocker cable prevents malware and hackers from exposing your information when using public charging sockets that are easy to manipulate and steal your data without your knowledge. The cable is equipped with a Sync stop function (data blocker) that prevents accidental data transfer when charging your device via a public charging station or in someone else's computer. Data blocker achieves this by blocking data transmission and only allows current to pass. Data blocker allows you to avoid identity theft and interception of calls and messages. This cable eliminates the risks of malware installation and data theft. Dekra approved. [DataBlocker 4in1 Cable 2m](#)
