

# Flow 3in1 cable

Did you know...

***about 15% of the earth's electricity consumption is wasted through standby?!***

The solution is here: a quality product that increases awareness of energy. One of the world's 50 best inventions according to TIME Magazine.

Watch the power flow through the cable while charging your phone or tablet. The light diminishes when your device is nearly fully charged and stops completely when the battery is 100% charged. No waste of power.

With 3 different connectors and 100cm cable you can charge most phones and tablets on the market (Micro USB, Type-C and Apple Lightning).

Swedish patented, CE quality product that increases awareness of energy.

Made in China. CE
