DataBlocker 4in1 Cable

Experts warn against 'juice jacking', a type of fraud that takes place at public USB ports in places like airports, hotels or cafés..

Load with DataBlocker and no hacker can manipulate the public socket you connected your device to.

The DataBlocker is equipped with a Sync stop function (data blocker) that prevents accidental data transfer when charging your device via a public charging station or in someone else's computer. The DataBlocker achieves this by blocking data transfer and only allowing current to pass.

DataBlocker prevents identity theft and call interception, it eliminates the risks of malware installation and data theft such as your photos and messages, in addition, the cable prevents remote control of your device.

DEKRA
